The present invention describes an isolated terpene synthase (1)

comprising a region with at least 20% identity to region 265-535 of a 548

amino acid (aa) sequence (1a), given in AAY99031. (1) contains nine alpha
carbon atoms (alphaC) that have interatomic distances, between each
carbon atoms (alphaC) that have interatomic distances, between each
cother, within tabulated ranges, have a centre point (within a sphere of
cardius 2.3 Angercom) within tabulated ranges, and have an ordered
arrangement of R groups (defining as side chains), excluding specific
carbulated arrangements (tables given in the specification). (1), and
cother, acylic, optionally hydroxylated), useful e.g. as fragrances,
flavours, pheromones, defensive agents, pigments, antitumour agents,
components of signal transduction pathways, precursors of steroids
components of signal transduction pathways, precursors of steroid
components of signal transduction pathways, precursors of steroid
components of signal transduction pathways, precursors of steroid
components of signal transduction pathways, precursors of steroids
components of signal transduction pathways, precursors of steroid
components of signal transduction pathways, precursors of steroid
components of signal transduction pathways, precursors of steroid
components of signal transduction from the analysis of products formed by
controling them) are used as controls in the analysis of products formed by
controling expression of terpene synthases or inheritance of the gene in
plant breeding programs. The new synthases may produce novel terpene
products. AAA38910 to AAA38938 and AAX90831 to AAA38911 to AAA38931 to AAA38931 to AAA38931 to AAA38931 to AAA38931 to AAA38931 to AAA38931 to AAA38931 to AAA38931 to AAA38931 to AAA38933 and AAX90831 to AAA38933 and AAX90833 to AAA38933 to AAA38933 to AAA38933 to AAA38933 to AAA38933 to AAA38933 to AAA38933 to AAA38933 to AAA38933 to AAA38933 to AAA38933 to AAA38933 to AAA38933 to AAA38933 to AAA38933 to AAA38933 to AAA38933 to AAA38933 to AAA38933 t
Novel terpene synthase enzymes, useful for producing terpene hydrocarbons, e.g. fragrances or antitumor agents, are derived from known enzymes by specific amino acid alterations.
                                                                                                                                                                              Disclosure; Page 414-418; 450pp; English

The present invention provides the protein and coding sequences of monoterpene. Synthases from the grand fir. These include (-)-camphene synthase, (-)-beta-phellandrene synthase, terpinolene synthase, (-)-limonene/(-)-alpha-pinene synthase, limonene synthase. myrcene synthase and pinene synthase. The sequences can be used to produce transgenic plants expressing high levels of the enzymes, resulting in levels which are useful in protecting against and treating cancers, and to confer insect resistance on plants
                                                                                                                                                                                                                                                                                                                                           647 T; 0 U; 0 Other;

2178 2048 TATAAAGCTGAGAAGGCTCGTGGAGAATTGGCGTCCAGCATTGAATGTTACATGAAAGAC 2107 2168 GTGAAGGAACTGACAAGAGAGTTTCTGAAGCCCG---ACGACGTCCCATTCGCCTGCAAG 2224 AAGATGCTTTTCGAGGAGACAAGAGTGACGATGGTGATATTCAAGGATGGAGATGGATTC 2284 and a method of imparting or enhancing production of a gymnosperm sesquiterpene synthase in a prokaryotic or eukaryotic host cell, especially in a plant, in order to impart, enhance or modify production of sesquiterpenoids, and hence to alter the flavour or fragrance of plant products, to improve disease resistance or to alter ecological interactions mediated by farnesyl diphosphate and its derivatives GGTGTTTCCAAATTAGAAGTCAAAGATCATATCAAAGAGTGTCTCATTGAACGGCTGCC 2343 This is the sequence of a computer-generated nucleic acid coding for a grand fir (Abies grandis) B-alpha-bisabolene synthase polypeptide (see AAY06567) that has conservative amino acid substitutions relative to the native B-alpha-bisabolene synthase sequence given in AAY06562. B-alpha-bisabolene synthase is a wound- inducible enzyme capable of generating multiple sesquiterpenes, especially B-alpha-bisabolene, from farnesyl diphosphate. The invention provides gymnosperm sesquiterpene synthase nucleic acids and recombinant proteins, as well as expression vectors, 88 1108 CATCCTGAATGTACAGAGGAAGAGGCTCTCGATCACATCTATAGCATTCTGGAGCCGGCG <u> AGACTGCTGTTCAACACTGCAAGAGTGATGCAGCTGTTTTATATATGTACAGAGATGGCTTT</u> **AATCCGGAGTGCACAGAAGAAGAAGCTCTAAGTCATGTTTATGGTATCATCGACAACGCA** grand fir; sesquiterpene synthase; disease resistance; fragrance; flavour; GGTATCTCTGACAAAGAGATGAAAGACCATGTCAGCCGAACTCTTTCGATCCTGTGGC E-alpha-bisabolene synthase computer-generated nucleic acid sequence protein and Bohlman J, Jetter R, Steele CL; Grand fir (Abies grandis) sesquiterpene synthase genes products, useful for sesquiterpenoid production.                         This is the nucleotide sequence of grand fir (Abies grandis) B-alphabisabolene-synthase CDNA. It codes for a wound-inducible enzyme (see AAY06566) that is capable of generating multiple sesquiterpenes. Capable of generating multiple sesquiterpenes. The full-length cDNA was obtained by 5'RACE from a wound-induced grand fir stem cDNA library. It differs from the sequence of clone AGI, provided in AAX87534, by a single nucleotide at position 194 (C is AGI, T in the present by a single nucleotide in an amino acid change from Ala-65 in AGI to Val-65 in the protein of AXY06566. The present sequence is believed to be the correct sequence of grand fir B-alpha-bisabolene synthase cDNA. The invention provides gymnosperm seguiterpene synthase mucleic acids and recombinant proteins, as well as expression vectors, and a method of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 imparting or enhancing production of a gymnosperm sesquiterpene synthase in a prokaryotic or eukaryotic host cell, especially in a plant, in order to impart, enhance or modify production of sesquiterpenoids, and hence to alter the flavour or fragrance of plant products, to improve disease resistence or to alter ecological interactions mediated by farnesyl diphosphate and its derivatives

This is the sequence of a computer-generated nucleic acid coding for a grand fir (Ables grandis) E-alpha-bisabolene synthase polypeptide (see AAY06568) that has conservative amino acid substitutions relative to the native E-alpha-bisabolene synthase sequence given in AAY06562. E-alpha-bisabolene synthase is a wound- inducible enzyme capable of generating multiple sesquiterpenes, especially E-alpha-bisabolene, from farnesyl diphosphate. The invention provides gymosperm sequiterpene synthase in a prokaryotic or eukaryotic host cell, and a method of imparting or enhancing production of a gymnosperm sequiterpene synthase in a prokaryotic or eukaryotic host cell, sesquiterpenoids, and hence to alter the flavour or fragrance of plant of products, to improve disease resistance or to alter ecological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                297
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              91 GCACCCCAATITCCCCAAACGCTTCAATGGATTCTGAACAATCAACTGCCAGATGGCTCG 150

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This is the nucleotide sequence of the grand fir (Abies grandis) E-alphabisabolene synthase full-length cDNA insert of plasmid pAG1. The cDNA clone codes for a 817-amino acid wound-inducible enzyme (see AANOS662) that is capable of generating multiple sesquiterpenes, especially E-alphabisabolene, from farnesyl diphosphate. The full-length cDNA was obtained by 5'RACE from a wound-induced grand fir stem cDNA library. A separately contains a single nucleotide difference from AG1 (T for C at position 238) and is believed to be the correct sequence for grand fir E-bisabolene synthase. The invention provides squence for grand fir E-bisabolene synthase. The invention provides as well as expression vectors, and a method of imparting or enhancing production of a gymnosperm sesquiterpene synthase in a prokaryotic or ukaryotic host cell, especially in a plant, in order to impart, enhance or modify production of sesquiterpencies, and hence to alter the flavour or fragrance of plant products, to improve disease resistance or to alter ecological interactions mediated by farnesyl diphosphate and its
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    91 GCACCCCAATITCCCCAAACGCTTCAATGGATTCTGAACAATCAACTGCCAGATGGCTCG 150

This sequence encodes a pacific yew taxadiene synthase (TS). The sequence can be used to increase taxol biosynthesis into taxoids in transformed cells. The mucleic acid sequences can be modified to produce proteins with improved efficiency, and to redirect the targeting of the expressed polypeptide. The modifications can be to alter catalytic efficiency, to modify substrate utilisation, and to alter product outcome. The antibodies specific for the mature native pacific yew TS polypeptide can be used to purify TS polypeptides, cloning TS homologues from Pacific yew or other plant species, and as probes for blots and immunoassays
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             397 ATGTTCAATGCGCTCGGAGACGGAGATATCAGTCCGTCTGCATACGACACTGCGTGGGTG 456

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes an isolated terpene synthase (1)

comprising a region with at least 20% identity to region 265-535 of a 548

anino acid (as) sequence (1s), given in AAY99831. (1) contains nine alpha
carbon atoms (alphac) that have interatomic distances, between each
carbon atoms (alphac) that have interatomic distances, between each
other, within tabulated ranges, have a centre point (within a sphere of
radius 2.3 Angstrom) within tabulated ranges, and have an ordered
arrangement of R groups (defining as side chains), excluding specific
tabulated arrangements (tables given in the specification). (1), and
created enzymes, are used to produce a wide range of terpenoids (e.g.
cyclic, acylic, optionally hydroxylated), useful e.g. as fragrances,
flavours, pheromones, defensive agents, pigments, antitumour agents,
flavours, pheromones, defensive agents, pigments, antitumour agents,
flavours pheromones and bile acids, as photoreceptors and as co-factor side chains.
Some synthases with little or no catalytic activity (and nucleic acids
corcoding then) are used as controls in the analysis of products formed by
enzymatic synthesis; as nutrient supplements; for affinity purification
of isoprenoids; or to develop immunological reagents or nucleic acids for
conjonents or synthases or inheritance of the gene in
plant breeding programs. The new synthases may produce novel terpene
products. AAA38910 to AAA38938 and AAY90831 to AAY9085 repersent
sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel terpene synthase enzymes, useful for producing terpene hydrocarbons, e.g. fragrances or antitumor agents, are derived from known enzymes by specific amino acid alterations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    456
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          114

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides the protein and coding sequences of monoterpene synthases from the grand fir. These include (-)-camphene synthase, (-)-beta-phellandrene synthase, terpinolene synthase, (-)-limonene(-)-alpha-pinene synthase, limonene synthase. wyrcene synthase synthase. The sequences can be used to produce transgenic plants expressing high levels of the enzymes, resulting in levels which are useful in protecting against and treating cancers, and to confer insect resistance on plants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GACCITCACIACAAATCATCICCAAAATGCICTTGCCAAAAACAACGCAITTGATAAGTG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides the protein and coding sequences of monoterpene synthases from the grand fir. These include (-)-camphene synthase, (-)-beta-phellandrene synthase, terpinolene synthase, (-)-lalpha-pinene synthase, ilmonene synthase, myrcene synthase and pinene synthase. The sequences can be used to produce transgenic plants expressing high levels of the enzymes, resulting in levels which are useful in protecting against and treating cancers, and to confer insect resistance on plants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   738 TITICAAGAAAGAAATCAAAGAATCTCTGGATTACGTTTTATAGGTACTGGGACGCCGAAAG

The sequences when expressed in transfected earsma properties, improvement of defense capability, and the alteration of chere ecological interactions mediated by mycrene, limonene, pinene, or their derivatives. In particular they can be used for the production of plant seeds for the extraction of oil or meal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Mycrene synthase; limonene synthase; pinene synthase; flavour;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              917
                                                            The present invention provides the protein and coding sequences of monoterpene synthases from the grand fir. These include (-)-camphene synthase, (-)-beta-phellandrene synthase, terpinolene synthase, (-)-limonene (-)-alpha-pinene synthase, ilmonene synthase, myrcene synthase and pinene synthase. The sequences can be used to produce transgenic plants expressing high levels of the enzymes, resulting in levels which are useful in protecting against and treating cancers, and to confer insect resistance on plants
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1098 GGCTGTCAAGAAGGATCTTCCTGGAGGTGGAGTATGCTATAAAGTATCCGTGGCATAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes an isolated terpene synthase (1)

Comprising a region with at least 20% identity to region 265-535 of a 348

Cambon atoms (alphac) that have interatomic distances, between each carbon atoms (alphac) that have interatomic distances, between each other, within tabulated ranges, have a centre point (within a sphere of radius 2.3 Angatrom) within tabulated ranges, and have an ordered arrangement of R groups (defining as side chains), excluding specific tabulated arrangements (tables given in the specification). (1), and crelated enzymes, are used to produce a wide range of terpenoids (e.g. cyclic, acylic, optionally hydroxylated), useful e.g. as fragrances, related enzymes, are used to produce a wide range of terpenoids (e.g. cyclic, acylic, optionally hydroxylated), useful e.g. as fragrances, components of signal transduction pathways, precursors of steroid bormones and bile acids, as photoreceptors and as co-factor side chains. Some synthases and bile acids, as photoreceptors and as co-factor side chains. Some synthases with little or no catalytic activity (and nucleic acids encoding them) are used as controls in the analysis of products formed by encoding them) are used as controls in the analysis of producic acids controling expression of terpene synthases may produce novel terpene products.
